About Me

I'm a Web3 developer, block-chain enthusiast, and creative designer with strong experience building decentralized applications using React.js, Next.js, and Move (Aptos/Cedra), alongside modern front-end technologies. I'm highly proficient with technology, computers, and smart devices, with hands-on experience across the full development stack.

Beyond development, I'm an active community builder, on-boarding and educating developers and enthusiasts through workshops, testnets, and live events. I also bring a creative edge as a 2D designer, blending technical execution with visual design.

Education

- **The Federal Polytechnic, Ado-Ekiti**
Higher National Diploma (HND), **Electrical & Electronics Engineering**
School of Engineering
2022 – 2023
- **Captain Elechi Amadi Polytechnic, Rumuola, Port Harcourt**
National Diploma (ND), **Electrical & Electronics Engineering**
School of Engineering
2019 – 2021

Experiences

Flux Independent Developer: Built a portfolio dashboard web app in React/TypeScript, including wallet connectivity, a collection viewer with live metadata and price fetching, and transaction history powered by GraphQL queries. Implemented portfolio performance charting and a fully mobile-responsive layout. Diagnosed and resolved GraphQL schema mismatches, TypeScript build errors, and Vite/Rollup chunk-splitting issues that were causing production runtime failures.

Redemption Alert Independent Developer - Developed an first Progressive Web App for real-time emergency alerts, using Supabase for persistence and QR-code check-in for attendee tracking. Designed the system to function reliably under intermittent connectivity, a core requirement for its live-event use case.

Puffer Walks Independent Developer - Built a fitness-tracking web/mobile app that syncs step data from the Fitbit API into Firebase in real time. Fixed data-accuracy and concurrency bugs in the sync pipeline, and resolved SSL/DNS misconfiguration issues in the Vercel/Name-cheap deployment.

AgroConnect Independent Developer / Concept Lead. Designed a multi-pillar platform concept combining a social network for farmers, an asset-tracking module, and an AI assistant with local-language support.

Built A Decentralized Autonomous Organization Smart Contract in Move

Ribby Scanner Scan any web application, run targeted tests: security, performance, load, accessibility, and more. Site Audit Deep checks for SEO, SSL/TLS certificate health, DNS email security, and broken links.

Other Systems are available via Github

Industrial Training (SIWES)

P & P Computer Specialist

Ignatius Ajuru University of Education, Port Harcourt.
Student Industrial Work Experience Scheme (SIWES)
2020 – 2021

GPrime Computer Specialist

Industrial Training
2021 – 2022

Project

Project Title: Installation of a Solar Power System for the EEE Examination Office

Technical Skills

Languages & Frameworks: JavaScript, TypeScript, React, Vite, HTML/CSS, Move Data & Backend: GraphQL, Firebase/Firestore, REST APIs, third-party API integration (Fitbit, wallet SDKs) Tooling: Git, Vercel, DNS/SSL configuration, build tooling (Rollup/Vite), Technical SEO, Core Web Vitals optimization, QA testing (Including Appflow, Functionality and Err detection), 2D illustration/ graphic design, UI/UX for web and mobile-responsive interfaces.

Other Technical Skills

Electrical & Electronics Maintenance:

- Troubleshooting electrical circuits and systems
- Installation and maintenance
- Testing components
- Preventive maintenance of electrical equipment
- Safety compliance

Computer & IT Maintenance:

- Computer hardware assembly
- Software installation and system updates
- Networking setup and troubleshooting
- Peripheral device maintenance (printers, scanners, etc.)
- Technical support and user assistance

Interests / Hobbies

- computer trouble-shooting, problem-solving
